

## CS380 Lab Assignment – Client Server & Threads Part 1

Last week (in Assignment 5) you created a server that delivers a quote of the day. This week you should modify this code. Specifically:

- Modify this socket-based date server so that the server services each client request in a separate thread. *[tip: go through this weeks provided thread reading material before you begin this assignment]*

### **Assignment Submission Instructions:**

Submit your completed assignment through Moodle. You should submit (1) a zip file containing your Java code for the assignment, (2) a zip file containing screenshots showing your code running (the output from running your code through e.g. Eclipse),

Note: you should include comments in your code (written in your own words) to explain what is happening at each part of your code. Before submitting your code ensure that it is well commented and formatted (marks will be deducted for code that is not well commented and formatted).

Assignment submission deadline is available on Moodle. Penalties will be imposed on late submissions.
